VERSION WITH MARKINGS TO SHOW CHANGES
MADE PURSUANT TO 37 C.F.R. 1.121(c)(ii)

In the claims:

16. (Amended) A method of providing secure communication between a mobile node and a home domain using a foreign domain, comprising:

transmitting a registration request [message] from the mobile node to the home domain the request [message] comprising an identity of a user of the mobile node in encrypted form and network routing information in non-encrypted form;

the home domain receiving and processing the registration request [message] to generate a registration reply comprising one or more encryption keys for encrypting messages to be communicated between and among the mobile node home domain and the foreign domain; and

transmitting the registration reply from the home domain to the foreign domain and the mobile node.

generating a third encryption key for encrypting messages to be communicated between the foreign domain and the mobile node.
